

Groundbreaking America: New Quest for Mineral Independence

America is facing a serious problem. We are increasingly dependent on foreign minerals, which are essential for our economy and national security. This dependence leaves us vulnerable to supply disruptions, price shocks, and geopolitical instability.

In Groundbreaking America, author John Smith reveals the shocking truth about America's mineral dependence. He shows how we have become increasingly reliant on foreign sources for critical minerals, such as rare earth elements, cobalt, and lithium. These minerals are used in everything from smartphones to electric cars to military equipment.

Smith argues that America's mineral dependence is a serious threat to our national security. He points out that China controls over 90% of the world's

supply of rare earth elements. If China were to cut off our access to these minerals, it would cripple our economy and military.

Smith also argues that America's mineral dependence is a threat to our economic security. He points out that the United States imports over \$50 billion worth of minerals each year. This outflow of money hurts our trade deficit and weakens our economy.

Groundbreaking America is a wake-up call for America. Smith shows us the dangers of our mineral dependence and he offers a plan for how we can achieve mineral independence. He argues that we need to invest in domestic mining, recycling, and research and development. We also need to work with our allies to secure access to critical minerals.

Groundbreaking America is a must-read for anyone who wants to understand the challenges facing America's economy and national security. Smith's book is a wake-up call for America. It is time for us to take action to achieve mineral independence.
